Addressing the psychosocial impacts of climate change, injustice, and inequality

The skills developed in this workshop are transferable to any learning environment where instructors and students engage in highly charged topics.

The program builds understanding of the complex psychosocial dimensions of climate change and other stressors, assesses the hidden emotional and affective implications of existing offerings, and creates a collaborative creative process for developing innovative new curricula and teaching modules that respond to the unique demands of today's educational environment.

This program provides participants with:

- critical tools for developing and maintaining individual, organizational, and social resilience amidst dramatic systemic disruption
- pedagogical techniques for helping students respond to their emotional experiences of climate and social change
- a diverse and engaged community of practice around integrating social-emotional learning into curricular and co-curricular offerings
- the opportunity to develop innovative new offerings and teaching modules that support students' sense of agency and engagement.

**Workshop facilitators**

*Kevin M Gallagher, J.D., M.A.*

Kevin is an attorney, author, and the director of Emergent Resilience. His work focuses on helping climate change and environmental advocates of all ages navigate a climate changing world. Previously, Kevin worked as a climate change law and policy attorney in Washington, DC.

*Kirsten Rudestam, Ph.D.*

Kirsten has fifteen years of experience teaching college courses in sociology and environmental studies. She co-founded the Sati Center for Buddhist Studies' Buddhist Eco-Chaplaincy training program. Her academic research centers on the relationships between water governance, meaning-making, and environmental justice.

More on climate change and education | Sarah Jaquette Ray, author of the *Field Guide to Climate Anxiety*, will present "How to Keep Your Cool on a Warming Planet: An Emotional Toolkit for the Climate Generation" at the Autumn 2023 TEACH Symposium on Friday, September 29.
